Real Estate Price Prediction

Data-Driven Valuations for the Modern Real Estate Market

Made with GAMMA

Solving the Real Estate Guessing Game

In today's volatile market, 30% of properties are priced incorrectly—costing buyers thousands and sellers precious time. Our AI predicts fair market value for any Belgian property in seconds, not months.

Made with GAMMA

Our Competitive Edge – Data-Driven Intelligence

We analyzed 30,000+ live listings across every Belgian province. Our proprietary algorithm identifies pricing patterns humans miss—delivering accuracy competitors can't match.

Data Scale

30,000+ listings analyzed across every Belgian province

Pattern Recognition

AI identifies hidden pricing patterns humans miss

Competitive Advantage

Accuracy competitors can't match

How It Works

01

Input Property Details

Users easily enter key information like location, size, condition, and specific features of the property.

02

AI Analysis

Our sophisticated model instantly processes over 30,000 comparable live listings and historical data points.

03

Instant Valuation

Receive an accurate market price prediction for any Belgian property, complete with a confidence score, in seconds.

Made with GAMMA

The Solution – Immo-Eliza Dashboard

This is a decision-support tool, not just a calculator.

Instant Valuation

Predictive model analyzes the property in seconds.

Market Comparison

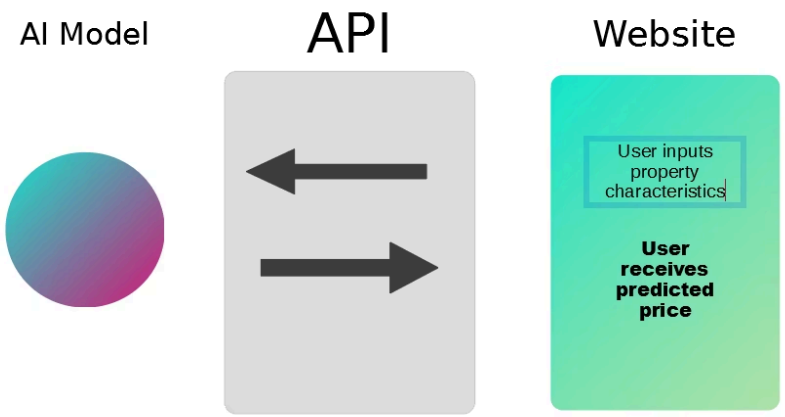
Shows actual vs. model predicted price side-by-side.

Investment Verdict

Instantly identifies if a property is a "Golden Opportunity" or "Overpriced Risk".

> This isn't just a calculator; it's a decision-support tool that tells you instantly if a property is a golden opportunity or an overpriced risk.

Made with GAMMA



The Bridge - our API

Connect your website to our AI model. 24/7 access to instant property valuations.

Our API acts as the bridge between your website and the AI valuation engine, making integration simple, fast, and reliable.

It enables seamless communication so users can request valuations directly from your platform and receive instant, data-driven results without leaving the experience.

Made with GAMMA

The Engine – Our Model

Technical sophistication behind the valuation.

Location (Zip Codes)

Geographic market positioning.

Livability (m^2)

Property size and usable space.

Number of Rooms

Layout and functionality.

Amenities (Garden/Pool)

Premium features and lifestyle value.

> Our XGBoost model analyzes over 15 distinct variables. We've achieved high accuracy ($R^2 > 0.70$), meaning our AI aligns with real-market trends better than traditional manual appraisals.

Made with GAMMA

Business Impact & ROI

Value for Every Stakeholder.

For Buyers

Avoid overpaying by thousands of euros

Save money with clearer pricing insights and make confident decisions backed by data.

For Agents

Provide instant, data-backed valuations to clients

Build credibility, answer faster, and close deals more efficiently with trusted estimates.

For Investors

Scan thousands of listings to find the 5% that are “Good Deals”

Identify high-potential opportunities quickly and maximize returns with a sharper deal pipeline.
